A title

Some content.

A title containing a `code` statement

`docs.adoc` should contain:

```
== A title containing a `code` statement
```

rather than:

```
== A title containing a <code>code</code> statement
```

A title containing an attribute: the attribute value

`docs.adoc` should contain:

```
== A title containing an attribute: {my-attribute}
```

rather than:

```
== A title containing an attribute: the attribute value
```

A title

In `docs.adoc` the id should stay above the title rather than moving below.

The nav title

The nav title is replacing the title.

`docs.adoc` should contain:

```
== A long title
```

rather than:

```
== The nav title
```

the attribute value

The title is replaced by the navtitle, with the attributes values.

`docs.adoc` should contain:

```
== A long title
```

rather than:

```
== the attribute value
```
